QUALITY MACHINES

Accu-Fab is committed to continuous quality improvement. Proof of this commitment can be seen in our investments in quality equipment and quality people.

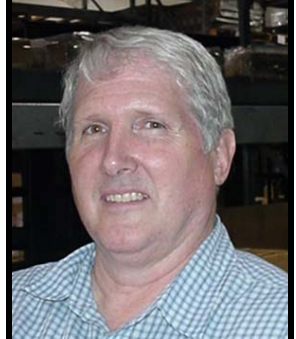

Accu-Fab has recently added a Coordinate Measuring Machine (CMM) to its complement of inspection and test equipment. The CMM augments the Virtek laser inspection machine that is to verify fabricated parts to determine dimensional integrity. The CMM allows us to check everything from straightforward prismatic parts to the most complex contours and surfaces produced in our machine shop. A complete analysis of parts in 2D or 3D helps us improve process control and reduces the probability of out-of-tolerance parts.

Accu-Fab uses these machines to verify parts during the manufacturing cycle, for process control, as well as for first piece and first article inspections. If quality and dimensional integrity are important for your parts, why not contact Accu-Fab and have the piece of mind of knowing that they can manufacture and verify your parts to the closes of tolerances?

QUALITY PEOPLE

Rob Lindsay
Quality Team Lead

Jim Bradshaw
Senior Quality Engineer

Charles Newkirk
Senior Quality Engineer

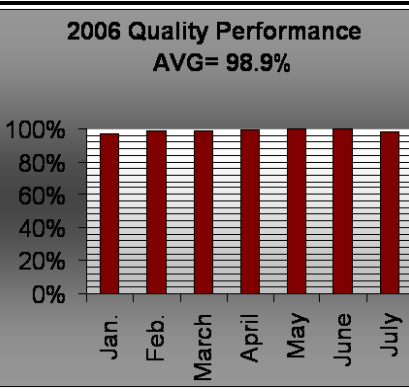

Quality machines, procedures, and people have always been the hallmark of Accu-Fab. Our manufacturing quality team has a combined total of over 66 years of metalworking and fabrication experience.

Accu-Fab's quality team collaborates with all product elements, such as Engineering Product Reviews, Customer Design Assistance, Programming, First Article Certifications and SPC Verifications.

A member of our quality team has also become a Certified CMM Technician, to ensure complex parts are inspected and verified for dimensional integrity prior to shipment to the customer.

With Accu-Fab *"pledging itself to manufacture defect-free products and provide exceptional service on-time and on-budget,"* Shouldn't you start cultivating a personal commitment for quality with Accu-Fab?

QUALITY RESULTS

You're the procurement manager and just got off the phone with incoming inspection. The parts are BAD! You will miss your deadline..... If this sounds familiar to you, then you need to consider switching to Accu-Fab, Inc.

YTD quality acceptance levels currently average over 99.8% with on-time delivery performances at 98.9%!

At Accu-Fab, we understand that good parts, delivered on-time is the way we have to do business today. Our staff, supported by ISO-9001 processes, is totally committed to achieving the results you need. Give us a call, and make the move to Good Parts - On-Time, All The Time!
