## Continuous Improvement Drives ACCU-FAB To Invest For The Future

### New Business System Platform

In today's highly competitive contract manufacturing marketplace, a commitment to continuous improvement is critical to maintaining and growing successful business relationships. Accu-Fab had been using the same business software for a number of years. Although the software worked well, it was not state of the art. As Accu-Fab continues to grow, we are committed to having nothing but the best people and the best software to support our customers.

Tony Sanchez, Customer Service

Accu-Fab is pleased to announce that, after an extensive evaluation of many options, on January 1, 2006 we implemented Visual Enterprise™, a new Enterprise Resource Planning (ERP) software system.

This new software enables us to provide enhanced service and support to you, our customer, via proactive account management. It combines company-wide integration with in-depth manufacturing control. Every function within Accu-Fab now has expanded capabilities providing exceptional visibility of information from our first contact with a customer to the final on-time delivery of each quality product shipped.

Allen Horton, Shipping

**On-Time Delivery Performance 100% In The Month Of December!  
Average for Last 9 Months is 99%!**

### Machining Adds 5 Axis Capabilities

Accu-Fab has invested in upgrades to our machining capabilities including a new rotary table and part indexer, giving us expanded 5 axis machining capabilities. The TR310 dual-axis Trunnion rotary table is bolted directly to the table of our three-axis HAAS Vertical Machining Center. This tooling enables us to machine multiple sides of a single part with one setup. We have also added tombstone fixtures to further enable us to machine multiple parts with a single setup. The resulting reduction in setups means that we are more competitive than ever, offering better prices to our customers. Now is a great time to send your machining quotes to Accu-Fab.

### New Assembly Area

Another area of recent investment has been in electro-mechanical assembly. Electro-mechanical assemblies continue to be a growing part of our business. These assemblies are often precision units requiring a dedicated work environment. Accu-Fab recently expanded existing capabilities purchasing assembly worktables and conveyors to create another modular area to facilitate efficient and flexible assembly operations. If you have electro-mechanical assemblies, or sub-assemblies, why not give us a chance to show how we can deliver turn-key products to you.
